

Technical Project Outsourcing

When you need help but don't want to hire, GESS International draws on industry knowledge and contacts to provide comprehensive technical project outsourcing services for the new emerging technology areas.

We leverage our established best practices to connect you with the assistance you need. Our key affiliates in India and the US have a complete, proprietary on-line software solution that gives you the ability to integrate your outsourced services provider directly into your existing development functions. No matter where your outsourcing partner is located - whether on-shore, off-shore or near-shore - you will have the benefits of an integrated system that keeps you in control. We partner with our key alliance partners in the US and India to offer these competitive based solutions for software design -- particularly in the area of embedded systems development.

When choosing to outsource, you will receive access to pre-screened technical candidates and real-time project management software. Your outsourced project is supported by our Japanese domestic sourcing strategy, our international proprietary management software system.

GESS supports your outsourced project with the hardware development of US partner Global Touchpoints Inc. For outsourcing that feels like in-house - but without the long-term commitments of hiring - [click here to contact GESS International](#).
